DETAILED ACTION

Double Patenting

The nonstatutory double patenting rejection is based on a judicially created doctrine grounded in public policy (a policy reflected in the statute) so as to prevent the unjustified or improper timewise extension of the "right to exclude" granted by a patent and to prevent possible harassment by multiple assignees. See *In re Goodman*, 11 F.3d 1046, 29 USPQ2d 2010 (Fed. Cir. 1993); *In re Longi*, 759 F.2d 887, 225 USPQ 645 (Fed. Cir. 1985); *In re Van Ornum*, 686 F.2d 937, 214 USPQ 761 (CCPA 1982); *In re Vogel*, 422 F.2d 438, 164 USPQ 619 (CCPA 1970); and, *In re Thorington*, 418 F.2d 528, 163 USPQ 644 (CCPA 1969).

A timely filed terminal disclaimer in compliance with 37 CFR 1.321(c) may be used to overcome an actual or provisional rejection based on a nonstatutory double patenting ground provided the conflicting application or patent is shown to be commonly owned with this application. See 37 CFR 1.130(b).

Effective January 1, 1994, a registered attorney or agent of record may sign a terminal disclaimer. A terminal disclaimer signed by the assignee must fully comply with 37 CFR 3.73(b).

Claims 15-20 are rejected under the judicially created doctrine of double patenting over claims of U. S. Patent No. 6,068,833 since the claims, if allowed, would improperly extend the "right to exclude" already granted in the patent.

The subject matter claimed in the instant application is fully disclosed in the patent and is covered by the patent since the patent and the application are claiming common subject matter, as follows: a method of treating asthma in a human, comprising administering a composition containing therapeutically effective amount of formoterol containing at least 90 or 99% by weight (R,R)-formoterol and at least 10 or 1% by weight of (S,S)-formoterol. The specification of US patent '833 (col. 8, line 64 to col.9, line 5) discloses both sets of concentration ranges.

Art Unit: 1616

Furthermore, there is no apparent reason why applicant was prevented from presenting claims corresponding to those of the instant application during prosecution of the application which matured into a patent. See *In re Schneller*, 397 F.2d 350, 158 USPQ 210 (CCPA 1968). See also MPEP § 804.

Claims 21-32 are rejected under the judicially created doctrine of double patenting over claims of U. S. Patent No. 5,795,564 since the claims, if allowed, would improperly extend the "right to exclude" already granted in the patent.

The subject matter claimed in the instant application is fully disclosed in the patent and is covered by the patent since the patent and the application are claiming common subject matter, as follows: a method for eliciting a bronchodilator effect comprising administering to a human in need of bronchodilation effective amount of formoterol containing at least 90 or 99% by weight (R,R)-formoterol and at least 10 or 1% by weight of (S,S)-formoterol. The specification of US patent '564 (col.9, lines 25-32) discloses both sets of concentration ranges.

Furthermore, there is no apparent reason why applicant was prevented from presenting claims corresponding to those of the instant application during prosecution of the application which matured into a patent. See *In re Schneller*, 397 F.2d 350, 158 USPQ 210 (CCPA 1968). See also MPEP § 804.

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Hett et al, *Enantio- and Diastereoselective Synthesis of all Four Stereoisomers of Formoterol*, Tet. Lett. 38, 1125-1128 (1997).
